

SafeNet Trusted Access and BeyondTrust PAM Solutions

Protecting and streamlining your IAM Environment

Securing your PAM Environment

Today's organizations are constantly under the threat of costly security breaches. Privileged accounts are at greatest risk because they provide access to an organization's most sensitive accounts. This is why it is so important to ensure that only verified and validated privileged users can gain access to the BeyondTrust system.

Privileged Access Management and Access Management: Better Together

Thales and BeyondTrust work together to minimize the risks associated with hijacked credentials. Thales validates identities and enforces access controls for privileged users logging into the BeyondTrust console, while BeyondTrust provides privileged management features for privileged users/accounts, and manages passwords and privileged sessions.

SafeNet Trusted Access provides powerful protection for privileged accounts by enforcing access policies and multi-factor authentication (MFA) at the BeyondTrust login screen.

By continuously applying authentication and enforcing rigorous access policies at the access point, SafeNet Trusted Access offers a Zero Trust approach to security that allows only verified administrators to access privileged accounts.

Highlights

Unified Security

- Access Management enforces the right level of security at the access point for BeyondTrust and other applications in a single console.

Convenient and Secure

- Convenient yet secure access to business resources increases productivity and reduces workload at the helpdesk without compromising security or compliance.

Simplified Strong Authentication

- Automated workflows provide flexible, context-based authentication and a broad range of strong authentication options to mitigate reliance on passwords.

Protect Everything

- Apply a Zero Trust security model by extending policy-based access, single-sign-on, continuous authentication, and multi-factor authentication to your BeyondTrust solution and other cloud applications.

SafeNet Trusted Access lets admins configure strict access controls for the BeyondTrust console while enforcing less stringent access controls for less sensitive applications and regular users. Administrators are able to create context-based, adaptive access policies that evaluate risk conditions continuously and enforce strong authentication where needed. SafeNet Trusted Access ensures the right people have access to the right apps under the right conditions.

SafeNet Trusted Access integrates easily with BeyondTrust to provide an elegant solution that balances security and usability to protect all user accounts from misuse at the access point while enhancing reporting and visibility for compliance.

How the Joint Solution Works

SafeNet Trusted Access integrates with the BeyondTrust platform to allow businesses to scale securely in the cloud, simplify compliance, and secure the access point.

Scale securely in the cloud

Access Management enables you to expand with the confidence you are secure. Protect all cloud apps with centralized policies and a range of authentication methods.

Security at the access point

SafeNet Trusted Access enforces access policies and the appropriate level of authentication to admins accessing the BeyondTrust consoles, protecting them from unauthorized access and reducing the risk of a data breach.

Regular Users

- Authenticates regular & privileged users
- Applies conditional policies & SSO to all apps
- Authenticates to BeyondTrust Privileged Remote Access

For Privileged Accounts

- Stores passwords
- Manages and rotates passwords
- Isolates, monitors and records privileged sessions

Key Benefits

Together, SafeNet Trusted Access and BeyondTrust let you control access to critical systems without hindering the work privileged users need to perform. You can define privileged access controls leading to productive security while consolidating the tracking approval and auditing of privileged accounts in one simple and easy-to-use console.

About BeyondTrust

BeyondTrust is the worldwide leader in Privileged Access Management, offering the most seamless approach to preventing data breaches related to stolen credentials, misused privileges, and compromised remote access. The extensible platform, trusted by half of the Fortune 100, empowers organizations to easily scale privilege security as threats evolve across endpoint, server, cloud, DevOps, and network device environments.

About Thales Access Management

Thales's industry-leading Access Management and Authentication solutions let enterprises centrally manage and secure access to enterprise IT, web, and cloud-based applications with a Zero Trust approach. Utilizing policy-based conditional access, rigorous SSO, and universal authentication methods, enterprises can effectively prevent breaches, migrate securely to the cloud and simplify regulatory compliance.

About Thales

The people you rely on to protect your privacy rely on Thales to protect their data. When it comes to data security, organizations are faced with an increasing number of decisive moments. Whether the moment is building an encryption strategy, moving to the cloud, or meeting compliance mandates, you can rely on Thales to secure your digital transformation.

Decisive technology for decisive moments.
